

Added Value in 2004:

Over the first two weeks of 2004, our hosting services received a massive upgrade with a shift to all new high-speed apache/linux servers including a roll-out of our new Client Server Management Tools powered by the highly-acclaimed Plesk 7.0.3. Demo Plesk7 here***

Using an ordinary web browser over SSL, Bulb's Client Server Management Tools (CSMT) puts you in control of your website right at the server level giving you complete 24/7 access to services like the setup of unlimited POP email accounts (free), management of mail, issuing or changing of passwords, the ability to create web-users, manage ftp accounts, download statistical usage reports and much more (see features at a glance below). The management of your site using Plesk, is extremely easy with a WinXP style interface and the best part is, we've added this top-level control at no additional charge to existing hosting fees, giving you the power to actively control your site and mail-server, on the fly. Continued free Technical Support via email to jeff@bulbdesign.com in regard to CSMT or any aspect of your website, is additionally available as a standard feature of our hosting service.

Hosting Features at a Glance:

- 1 Hour of free update to your site, per month (\$40.00 value)**
- Create and manage unlimited subdomains (free)
- Create and manage unlimited POP email accounts (free)

- Download statistical usage reports
- Improved Log File Management
- View your site statistics online with Webalyzer
- HTTP Streaming for your Real and Microsoft Media Files
- Priority based help with the installation of your scripts
- Strong, well maintained and secure servers
- Frequent upgrades as available (we rolled out Plesk 7.0 in Jan. Upgraded to 7.0.2 in March and in June have upgraded to 7.0.3* newest)
- Continued free Technical Support via email to jeff@bulbdesign.com (we're also testing live support over VOIP, currently).
- Hosting fees are locked - we have not modified our monthly hosting fee since starting business in 1998.

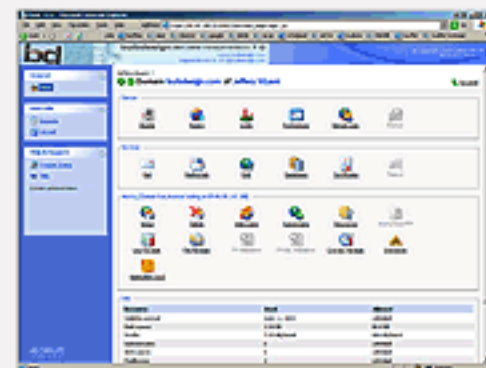

CSMT and Plesk7

***Demo Plesk7 here:
<http://www.sw-soft.com/en/products/plesk7/demo>

*Plesk 7.0.3 Patch for UNIX and Linux systems is a cumulative patch that resolves several known issues, and includes 7.0.1 and 7.0.2 corrections and additions. Benefits of this upgrade include:

- Security fixes and upgrades
- Plesk will now allow domains starting with numbers.
- FrontPage upgrade processes directories and files with embedded spaces in their names correctly now
- WebMail blacklist enabled.
- Problem with left navigation frame in Safari browser resolved.
